| Calcium Carbonate | 471-34-1 | 207-439-9 | 10-20 | - |

Product Application:

RoadCem is used in soil stabilization and road construction applications as an additive to cement. The dose of RoadCem is determined as a function of material being treated, cement type being used and the quantity of Cement being used as well as a function of the required performance of the finished product. Guidelines for use are available on request.

Clause:

Above details obtained from our supplier/producers and put at your disposal without prejudice. The above doesn't discharge users/consumer from executing a proper entry-control and/or verification of quality and/or suitability of the product for the intended use.
